Ex No:9	Fundamental features of Tableau
Date:-08/03/26	Video Link - https://youtu.be/RNVAmW_fXuc

Aim

To understand the fundamental features of Tableau and to create individual visualizations such as bar charts, line charts, pie charts, maps, and scatter plots using sample datasets.

Tools

o Power BI/Tableau

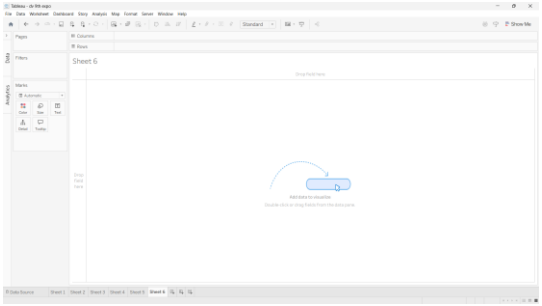
Description

This experiment introduces the core features of Tableau — a powerful data visualization tool. Tableau enables users to connect to various data sources, clean and transform data, and create a wide range of interactive visualizations. The task involves exploring Tableau's interface, using drag-and-drop features to generate charts, applying filters, and customizing the visual display. It emphasizes building individual plots to represent different types of data clearly and effectively.

Step 1:

- Open Tableau.
- On the start page select Sample – Superstore dataset.
- Tableau loads the dataset and displays the data fields.

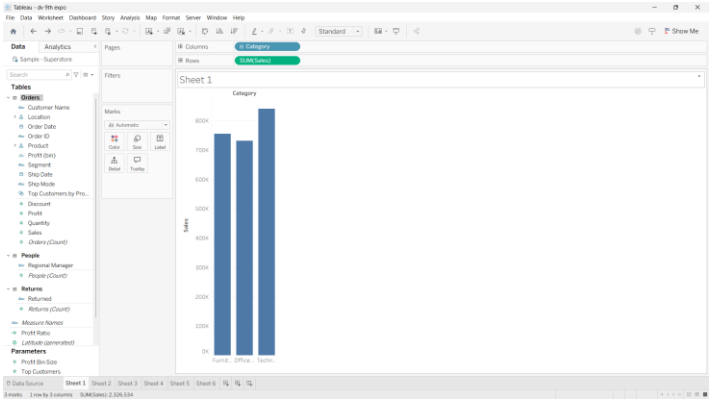
Output:



Step 2: Create Bar Chart

- Open Sheet 1.
- Drag Category → Columns.
- Drag Sales → Rows.
- Tableau automatically creates a Bar Chart.

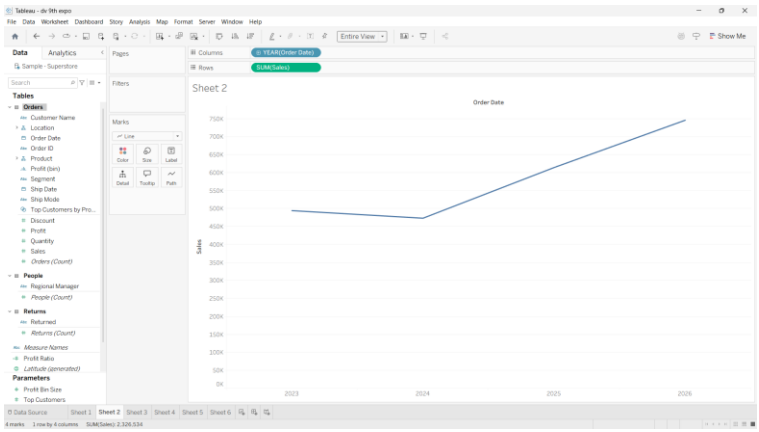
Output:



Step 3: Create Line Chart

- Open Sheet 2.
- Drag Order Date → Columns.
- Drag Sales → Rows.
- Select Line Chart from Show Me.

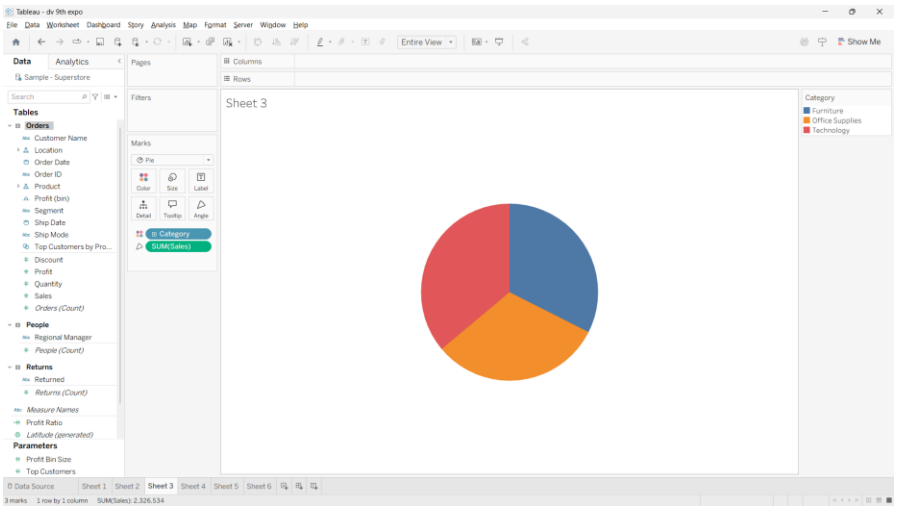
Output:



Step 4: **Create Pie Chart**

- Open Sheet 3.
- In Marks card, change Automatic → Pie.
- Drag Category → Color.
- Drag Sales → Angle.

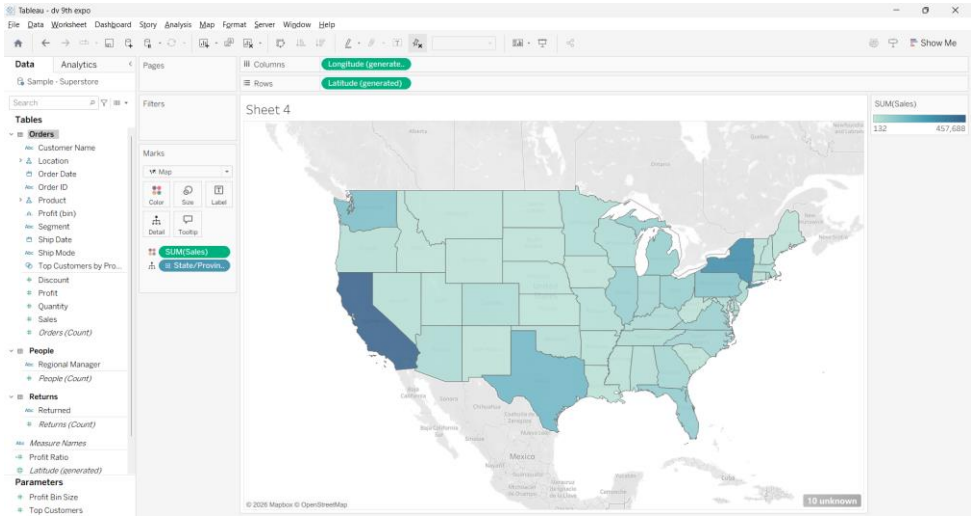
Output:



Step 5: Create Map Visualization

- Open Sheet 4.
- Drag State → workspace.
- Tableau automatically generates a Map.
- Drag Sales → Color to represent sales intensity.

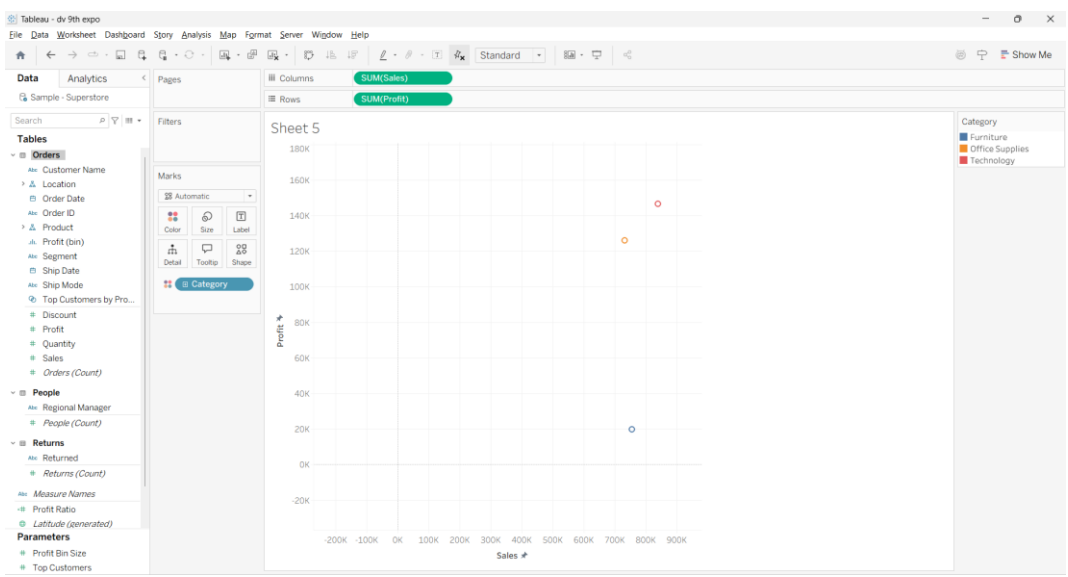
Output:



Step 7: Create Scatter Plot

- Open Sheet 5.
- Drag Sales → Columns.
- Drag Profit → Rows.
- Drag Category → Color.

Output:



Result: The required visualizations Bar Chart, Line Chart, Pie Chart, Map, and Scatter Plot were Successfully created using Tableau with the Sample Superstore dataset
